STRAIN

THRIVE
(SATIVA-DOMINANT)

Currently our most haze influenced plant in house at MYC, the odor that permeates throughout the building any time she is touched is on another level. In parallel with the flavor, the aromas bring a range of familiarities to your senses with floral notes, citrus, pepper, and solvents. It is so hard to put your finger on that smell specifically, but the complex nature of the combinations of aromas truly makes this a unique offering that gets people talking.

With notes of a floral citrus, pine, pepper, gas, and sour lemons – this incredibly tasty plant has a mouthwatering flavor that keeps you wanting to come back for more.

Focused, Energetic, Uplifted – an overall mood enhancer. Consumers have reported an initial rush in the head that converts to an energized and motivated state of mind. This sativa dominant strain is quite a strong specimen, so head caution to the low tolerance consumer.
